2. Repo

3. Workflow

The screenshot displays the KNIME Analytics Platform interface. The top bar shows the application name 'KNIME' and the current workspace path '/Users/admin/knime-workspace'. Below this, a navigation bar includes 'Home', 'KNIME_project', and 'Upload' buttons. The main workspace is divided into three panels: a left sidebar with 'Local space' and 'Example Workflows', a central canvas showing a workflow diagram, and a right sidebar with a 'Select a node to configure' prompt. The workflow diagram starts with a 'CSV Reader' node, followed by 'Column Filter', 'Normalizer', and 'Table Partitioner'. The 'Table Partitioner' node branches into three parallel paths: 'Decision Tree Learner', 'Logistic Regression Learner', and 'Random Forest Learner'. Each learner node is followed by its respective predictor node ('Decision Tree Predictor', 'Logistic Regression Predictor', and 'Random Forest Predictor'). Finally, each predictor node is connected to a 'Scorer' node. The right sidebar contains a large text area with the prompt 'Select a node to configure'.

Select a configured or executed node to show the node output.
